

Solution Requirements

Date	15 JULY 2026
Team ID	
Project Name	AI Powered Debt Relief & Financial Recovery Platform
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Borrowers register and log in securely using encrypted passwords.	High
2	Authorization levels	Only authenticated users can access their own loans, financial profiles, and settlement records.	High
3	External interfaces	Connect with AI APIs for settlement prediction and negotiation strategy generation.	High

4	Transactions processing	Store borrower details, loans, financial profiles, AI history, and settlement records securely.	High
5	Reporting	Generate financial reports, settlement recommendations, loan summaries, and AI interaction history.	Medium
6	Business rules, etc.	One borrower can own multiple loans, each loan belongs to one borrower, financial profile is unique per borrower, settlement recommendations depend on financial analysis.	High
7	Compliance to laws or regulations	Follow data privacy standards, encrypted password storage, secure authentication, and financial data protection.	High
8	<i>Other</i>	Generate AI-powered negotiation strategies and settlement letters automatically.	High

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria

1	Performance & Speed	Settlement prediction and dashboard should load quickly.	Response time less than 2 seconds
2	Scalability	Support increasing numbers of borrowers and loan records.	Supports over 10,000 users
3	Security & Data Privacy	Encrypt passwords and secure borrower financial data.	AES-256 encryption and HTTPS
4	Reliability & Availability	System should remain available continuously.	99.9% uptime
5	Usability & Accessibility	Simple and responsive interface accessible on desktop and mobile devices.	Easy navigation and responsive design
6	<i>Other</i>	Modular architecture for future AI and cloud integration.	Easy upgrades and code maintenance
